Presentación

Presentation

The Port of Huelva has closed the year 2022 with a total traffic volume of 32.1 million tonnes, which is 5% more than the previous year and positions it on a growth path.

Thanks to the high activity generated by the companies of the port community and the projects undertaken by the port to provide a first-rate service and to continue increasing the volume of traffic, these excellent figures position us on a path of growth that will create wealth and jobs in the port's area of influence.

That could also be seen from the revenues, whose net amount stood at €44.1 million, which is up 1% on the previous year.

It was a very important year with a very positive outcome due to the impact on the growth of the Port of Huelva and the city of the many projects implemented during the year: over €62 million were invested to continue positioning the port as the intermodal logistic hub of south-west Europe and a leader in the Spanish port system in the movement of liquid and solid bulk.

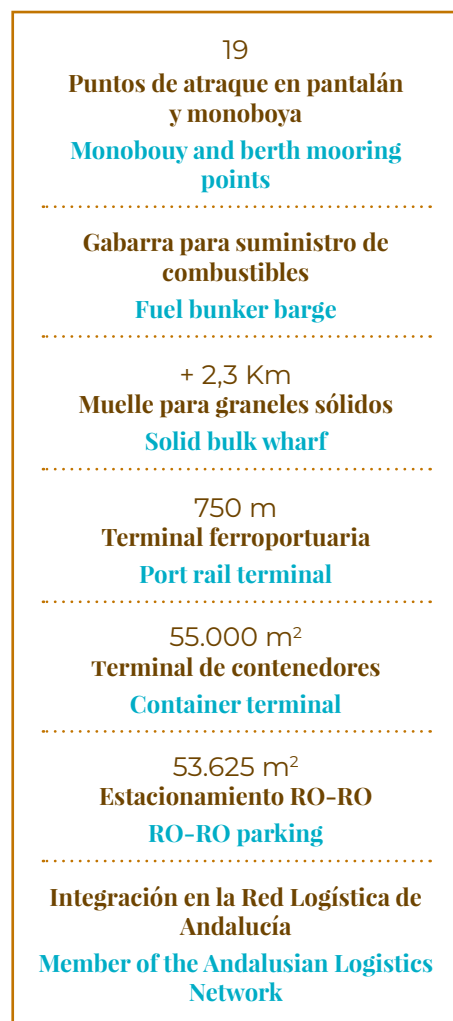

The Port of Huelva ended the year in an optimum position in the new energy transition model, based on its seeking more sustainable and environmentally friendly energy sources. The commitment to diversify its activity makes the port a leading hub in the energy transition with biofuel and green hydrogen projects, thanks to its strategic position and hosting the leading industrial enclave of Andalusia.

In tandem to this port growth, progress was made in the outreach to the city, with actions to complete the remodelling plan of the whole harbourfront from the Shipyards to El Sebo Headland, with the start of the work to remodel the areas around the Monument to Columbus, the rebuilding of the Fountain of the Nations on the promenade along the river estuary or the refurbishment of the Tharsis Wharf; these are in addition to those already implemented, including the remodelling of the Francisco Montenegro Avenue or the restoration of the Monument to Columbus.

This great transformation and outreach of the Port to the city will be completed in the coming years with the project to remodel the Levante Wharf; this will be a huge boost to the landscape and urban transformation and generation of economic activity for the city.

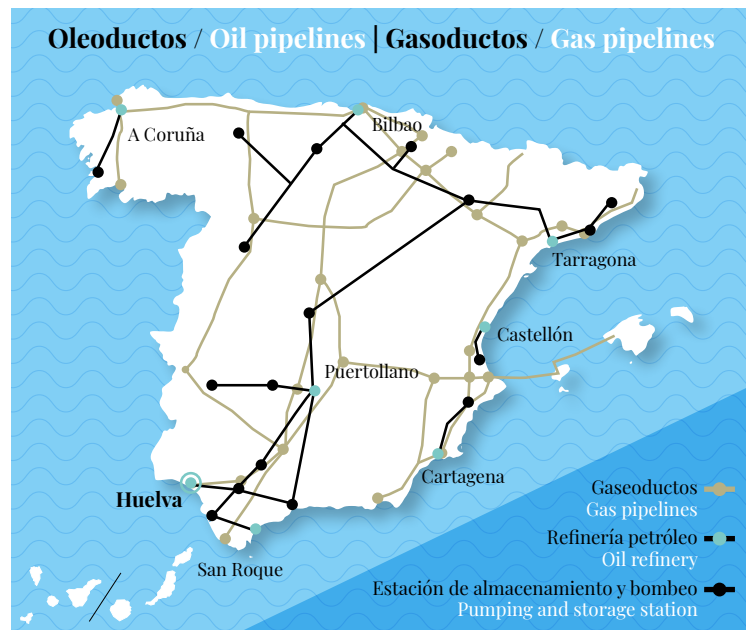

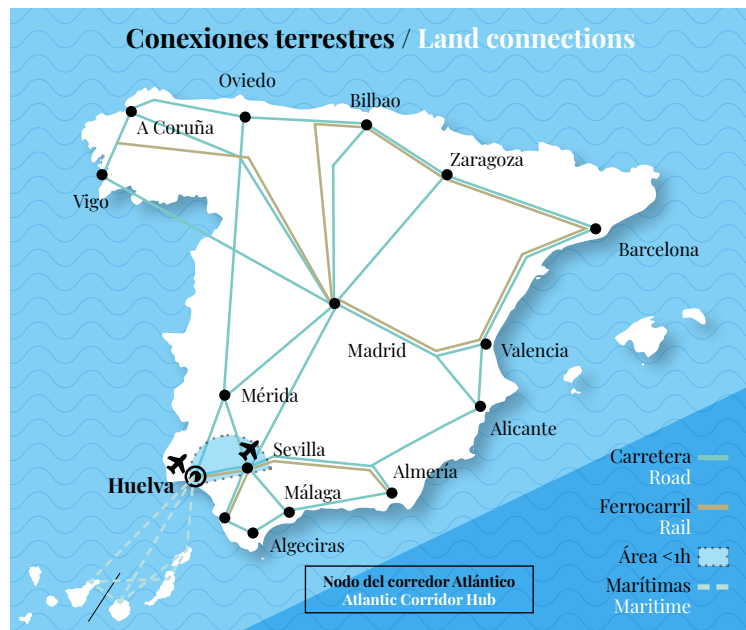

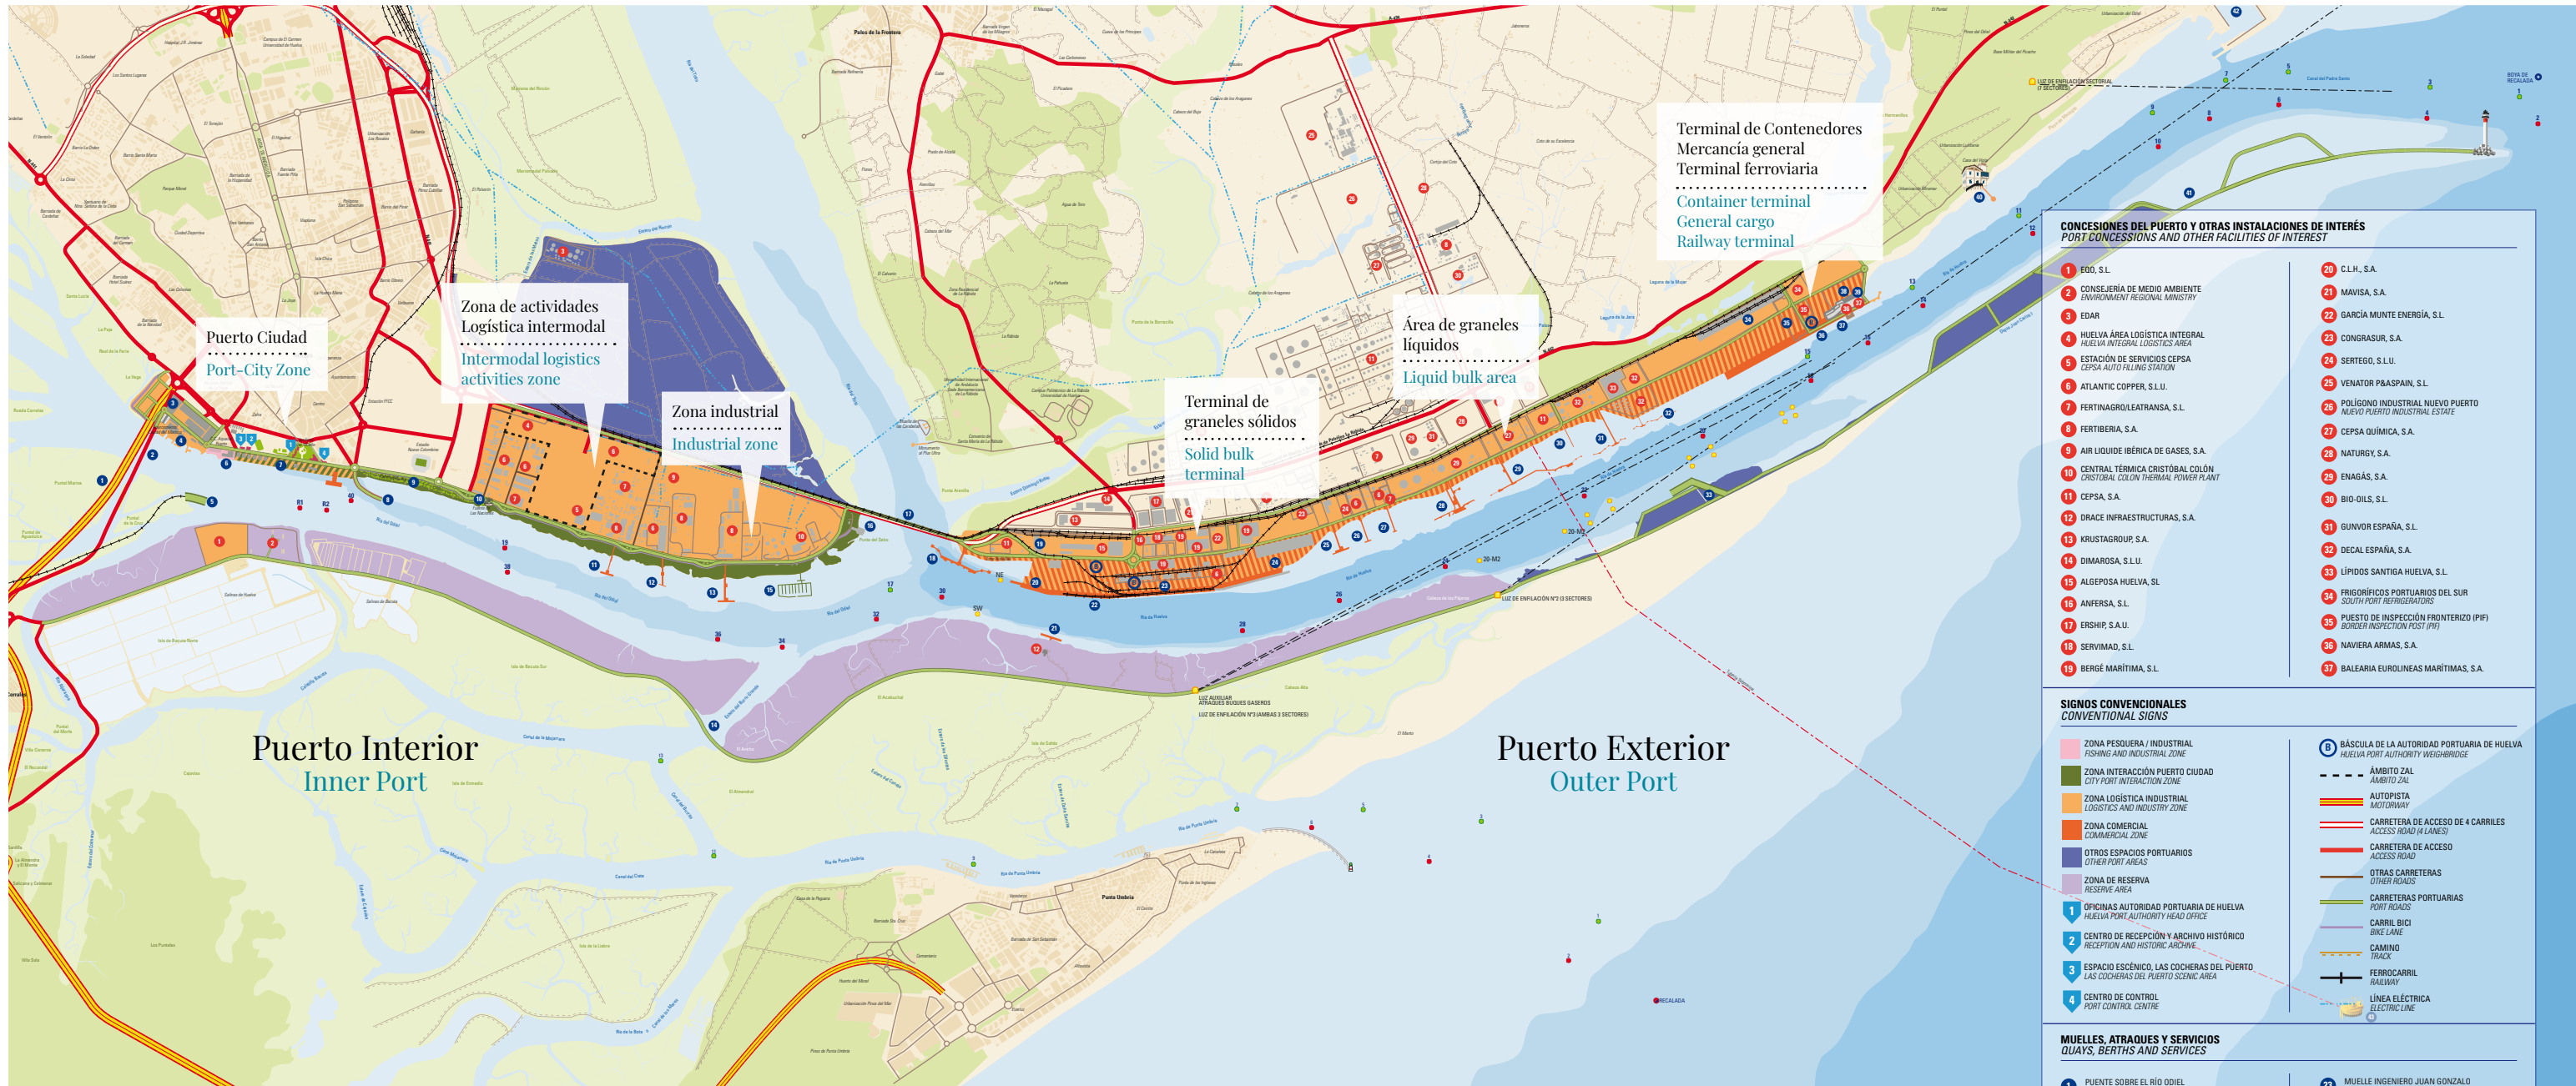

As regards the Corporate Social Responsibility Plan of the Port Authority, which was approved by the Board of Directors at the time, the Port-City call was held in 2022; thanks to which 87 projects have been co-financed and 147 sponsorship contracts signed, in relation to the different social, sport and cultural activities in the Plan.

The Port of Huelva ended the year in a consolidated position as a multi-modal and logistics hub in the south west of the Iberian Peninsula and a leading energy hub in the new energy transition scenario, which is driving the social and economic development of the whole of its area of influence.
